Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4,6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Hardinge (2,406,832).

Hardinge discloses a plate comprising first plate member having a first mount and a first support member extending from the first mount; a second plate member having a second mount and second support extending from the second mount; a plurality of apertures disposed in the first mount and the second mount, a stop (13,14,15,16,17,18) disposed on the first plate member, as best seen in FIGS.1,3, wherein the first support member has a plurality of apertures (12) positioned along a length thereof, and the stop (13) is operative to be inserted into a selected one of the aperture; as best seen in FIG.3; wherein the first support member and the second support member are adapted to engage each other in an axially adjustable manner , with the first support member being sized and shaped such that at least a portion thereof is receivable within a channel in the second support member, and the stop is adapted to limit such axial adjustment by being mounted to the first support member and extending outwardly therefrom such that, as the first support member is inserted into the channel in the second support member and axially adjusted to draw said first

Art Unit: 3733

mount and said second mount toward each other, further axial adjustment of the first mount and the second mount toward each other is prevented upon the stop contacting an end of the second support member; wherein the stop permits axial adjustment of the first mount and the second mount away from each other; as set forth in column 2, lines 5-55, column 3, lines 1-65.

Response to Amendment

Applicant's arguments, see Remarks, filed 3/27/07, with respect to the rejection(s) of claim(s) 4-7 under 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Hardinge.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
